

## CA-Network

Assignment-II: Identify a real-world application for both Parallel Computing and Network Systems. Explain how these technologies are used and why they are important in that context.

# Parallel Computing - Weather forecasting.

Weather forecasting uses Parallel computing to process huge amounts of climate data quickly. Multiple processors work together to simulate weather model faster and more accurately. This helps in giving early warnings for storms or disasters.

# Networked System - Online Banking

Online banking is a ~~real~~ real-world use of networked systems. Banks connect servers and devices over a secure network to let users check balances, transfer money, and pay bills from anywhere. It is important for fast, secure, and real-time access to financial services.
